Agenda

Our understanding of the context

AGENDA

Executive Summary

Flair Airlines

Flair Airlines is Canada's third-largest airline, an ultra low cost carrier flying Canada, the US and Mexico on an all economy Boeing 737 fleet.

3 processors with no orchestration

Flair Airlines uses Braintree, Elavon, and Nuvei with a simple internal orchestration model and with limited rules fragmented across providers

KEY CHALLENGES

- Fragmented infrastructure with different builds across providers
- Fully manual reconciliation
- Opportunity to integrate new alternative payment methods across markets
- Plan to reduce processing costs
- Dilemma towards build or buy

WHAT WILL YOU GET BY WORKING WITH YUNO

OVER 1,500 INSTANT PAYMENT CONNECTIONS

Connections to different APMs and providers with just a few clicks and at no extra integrations/maintenance costs

SMART-ROUTING, FALLBACKS, AND NEGOTIATING POWER

Connect different PSPs to stop depending on only one and create internal routes boosting efficiency. By connecting new partners, gain negotiating power over current and reduce MDRs.

ADVANCED PAYMENT CAPABILITIES FOR FULL RELIABILITY

Ensure zero downtime during peak hours with automated failover. Leverage Smart Routing to direct transactions to the most cost-efficient acquirer per region, optimizing approval rates and FX costs globally.

Flair Airlines' current setup

THE CURRENT SETUP HAS MANY CONSTRAINTS

Missing Local APMs in Key Markets

Missing payment alternatives across top markets such as Apple Pay, Google Pay, Interac, Klarna, SPEI, Oxxo Pay, and others.

No Smart Routing Across three PSPs

Nuvei, Elavon, and Braintree run independent retry logic. A decline on Nuvei doesn't failover to Elavon — transactions retry on the same acquirer and are limited to certain rules

Reconciliation Across three Providers

Three PSPs, separate dashboards and settlement cycles. No single source of truth — the payments team aggregates data manually across providers.

Fragmented Stack

No unified layer to orchestrate, monitor, or control payments. Each system operates on its own logic, so any change means working across disconnected tools instead of one place.

Why Yuno?

AGENDA

Thanks to its distinctive abilities,
Yuno is redefining global payments

Why we believe Yuno is the right partner for Flair

TRULY GLOBAL ORCHESTRATOR

Global **provider coverage + local rails** to launch and scale markets fast

A DEDICATED TEAM FOR FLAIR AIRLINES

On-the-ground team for **continuous support**: KAM, TAM, Solutions Engineer, and Fraud & Optimization specialists

PAYMENTS-AS-A-SERVICE FOR COMPLEX NEEDS

We **co-create, operate, and continuously optimize** your payments stack end-to-end

AWARD-WINNING AND RECOGNIZED BY CATEGORY LEADERS

Named a **World's Top Fintech Company and #1 Best Payment API (2025)**. Trusted by Uber, Qatar Airways, Rappi, GoFundMe

INFRASTRUCTURE RESILIENCE

Engineered for the high-concurrency spikes of gaming. Currently supporting **high-velocity merchants** where uptime and latency are critical to the user experience

Yuno provides a complete suite for global payments teams

Our competitive advantage

	ADVANTAGE	WHY THIS MATTERS	WHAT GLOBAL PSPS MISS
Approval rate levers Deep dive	A Enablement of the best local payment methods	Conversion goes up when people can pay “their way” in each market	Global PSPs expose only a limited set of local methods , often card-first lowering conversion
	B Domestic-first routing	Approvals rise because we route to local acquirers by default	PSP routes are often offshore or limited with fewer issuer/BIN controls leading to more declines
	C Recurring beyond cards	Card tokens + updater + smart retries reduce failed renewals	PSP pass-through often card-only resulting in higher churn
Cost and efficiency levers	D Full-fidelity controls & data	Actionable decline codes + simple per-country rules (e.g., when to use 3DS) enabling faster fixes	Generic errors , one-size settings; can't A/B routes
	E Cost & resilience	Domestic settlement cuts FX/cross-border fees; multi-PSP failover avoids single-vendor incidents; no lock-in	USD/offshore fees , single path; outages & FX drag raise unit cost

Yuno is the global payment partner to scale Flair Airlines

Global payment method coverage and leading capabilities for payment routing and orchestration, position Yuno as a best-in-class partner for Flair Airlines

Key Advantages

- 1000+ payment methods
- Day-one local coverage
- Higher approvals, lower cost
- Reporting and analytics

Business Case

AGENDA

Platform-scale value levers: small performance lifts compound into meaningful impact

	Operational levers		Cost levers	
Lever	Conversion uplift (local rails) 1	Smart Routing & Retries 2	Processing cost reduction 3	Run-ops reduction 4
How it works	+0.5–1.0% Routing each transaction to the best-approving acquirer, backed by network tokenization — winning back good customers wrongly declined at checkout.	+0.75–1.0% Dynamically routing transactions based on real-time bank performance recovers valid transactions that static aggregators lose.	7.5–12.5 bps Consolidating every processor on Yuno gives Flair the cost visibility and volume leverage to renegotiate acquirer rates, compressing the effective MDR.	3–4 FTE Leveraging Yuno's infrastructure avoids hiring a dedicated payment engineering squad and Ops team for each new market.
Conservative	\$1.5M/yr	\$2.2M/yr	+\$0.22M/yr	+\$0.25M/yr
Optimistic	\$3.0M/yr	\$2.9M/yr	+\$0.36M/yr	+\$0.38M/yr

Assumptions Illustrative ranges based on comparable scaled merchants; Flair-specific impact validated in pilot.

The estimated annual value can be monetized much earlier than with alternative solutions thanks to an expected time to market of 4-6 weeks leveraging Yuno's existing capabilities

Total impact

SCENARIO	L1 CONVERSION	L2 ROUTING	L3 COST	L4 RUN-OPS	TOTAL ANNUAL
Conservative 95% → 95.5%	\$1.5M	\$2.2M	\$0.22M	\$0.25M	\$4.17M
Optimistic 95% → 96%	\$3.0M	\$2.9M	\$0.36M	\$0.38M	\$6.64M
Average	\$2.3M	\$2.6M	\$0.29M	\$0.31M	\$5.41M

\$5.41M

average identifiable **annual value** across the four levers — against a current processing cost of **\$624,000/month**.

Assumptions L1 = lifting the current 95% approval rate by +0.5pp (conservative) / +1pp (optimistic) on ~126.300 monthly attempts × \$200 ticket; L2–L4 as sized on the value-levers slide; Flair-specific impact validated in pilot.

Pricing · Option 1 — success-based, as proposed

SUCCESS FEE

Per successful transaction, by monthly volume

0 – 80.000 trx **\$0.080** /trx

80.001 – 120.000 trx **\$0.065** /trx

120.001 – 200.000 trx **\$0.055** /trx

200.000+ trx **\$0.050** /trx

No setup fee. Rates apply marginally within each band.
Tiers sized to cover Flair's growth for the next 3 years.

PLATFORM & USAGE FEES

Metered — only what you use

Platform fee **\$5.000 / month**

Network tokens **\$0.015 / trx**

Smart routing **\$0.025 / trx**

Reconciliations **\$1.500 / month**

Minimum monthly billing **\$11.400**

The minimum is a volume commitment — it corresponds to 80.000 trx/month (~66% of today's website volume), not a fixed cost on top.

WHAT IT MEANS FOR FLAIR

At 120.000 transactions / month

LINE	MONTHLY	YEARLY
Successful trx (120k)	\$9.000	\$108.000
Platform fee	\$5.000	\$60.000
Network tokens	\$1.800	\$21.600
Smart routing	\$3.000	\$36.000
Reconciliations	\$1.500	\$18.000
Subtotal	\$20.300	\$243.600

≈ **\$0.169 all-in per successful trx** at 120k/month — falls as volume grows.
NOVA AI is billed separately on pure usage.

At **200.000 trx/month**: \$13.400 success fee + \$5.000 platform + \$3.000 tokens + \$5.000 routing + \$1.500 recon = **\$27.900 /mo · \$334.800 /yr** ≈ \$0.140 all-in per trx.

NOVA AI AI voice & WhatsApp outreach

Voice calls **\$1.20** / call min

WhatsApp conversation **\$0.15** / started conv.

WhatsApp messaging **\$0.015** / message

Pure usage — no minimums; excluded from subtotal & minimum billing.

Pricing · Option 2 — one flat monthly fee, total predictability

One number covers everything up to 150.000 transactions — a known, budgetable cost with a single variable rate beyond it.

FLAT MONTHLY FEE

\$19.000 / month

\$228.000 / year — invariant to volume, up to 150.000 trx / month

- ✓ Includes **platform fee, network tokens, smart routing & reconciliation**
- ✓ Covers **up to 150.000 successful trx / month**
- ✓ From transaction **150.001** onwards: **\$0.060 per transaction** + per-trx usage fees — network tokens \$0.015 and smart routing \$0.025 $\approx$ **\$0.100 all-in /trx**

WHAT IT MEANS FOR FLAIR

At 120.000 trx / month $\approx$ **\$0.158 /trx**

At 150.000 trx / month $\approx$ **\$0.127 /trx**

All-in per successful transaction — \$19.000 flat covering platform, network tokens, smart routing and reconciliation. NOVA AI is billed separately on pure usage.

At **200.000 trx/month**: \$19.000 flat + 50.000 $\times$ \$0.100 (\$0.060 fee + \$0.015 tokens + \$0.025 routing) = **\$24.000 /mo · \$288.000 /yr** $\approx$ \$0.120 all-in per trx.

NOVA AI AI voice & WhatsApp outreach

Voice calls **\$1.20** / call min

WhatsApp conversation **\$0.15** / started conv.

WhatsApp messaging **\$0.015** / message

Pure usage — no minimums; excluded from subtotal & minimum billing.

Pricing · Option 3 — success-based, lower tiers

SUCCESS FEE

Per successful transaction, by monthly volume

0 – 120.000 trx	\$0.070 /trx
120.001 – 200.000 trx	\$0.055 /trx
200.001+ trx	\$0.050 /trx

No setup fee. Rates apply marginally within each band.
Tiers sized to cover Flair's growth for the next 3 years.

PLATFORM & USAGE FEES

Metered — only what you use

Platform fee	\$5.000 / month
Network tokens	\$0.015 / trx
Smart routing	\$0.025 / trx
Reconciliations	\$1.500 / month
Minimum monthly billing	\$13.400

The minimum is a volume commitment — it corresponds to 120.000 trx/month (today's full website volume), not a fixed cost on top.

WHAT IT MEANS FOR FLAIR

At 120.000 transactions / month

LINE	MONTHLY	YEARLY
Successful trx (120k)	\$8.400	\$100.800
Platform fee	\$5.000	\$60.000
Network tokens	\$1.800	\$21.600
Smart routing	\$3.000	\$36.000
Reconciliations	\$1.500	\$18.000
Subtotal	\$19.700	\$236.400

≈ **\$0.164 all-in per successful trx** at 120k/month — falls as volume grows.
NOVA AI is billed separately on pure usage.

At **200.000 trx/month**: \$12.800 success fee + \$5.000 platform + \$3.000 tokens + \$5.000 routing + \$1.500 recon = **\$27.300 /mo · \$327.600 /yr** ≈ \$0.137 all-in per trx.

NOVA AI AI voice & WhatsApp outreach

Voice calls **\$1.20** / call min

WhatsApp conversation **\$0.15** / started conv.

WhatsApp messaging **\$0.015** / message

Pure usage — no minimums; excluded from subtotal & minimum billing.

Build vs. Buy

AGENDA

Building this in-house diverts Flair's team from running an airline

TO SOLVE THIS IN-HOUSE, FLAIR WOULD STAND UP — AND FOREVER MAINTAIN:

- ↗ Smart routing & automated failover across **Nuvei, Elavon and Braintree**
- ↗ A **PSP-agnostic token vault** & network tokenization
- ↗ Account updater + issuer-tuned **retry logic**
- ↗ **Local APM integrations** — Apple Pay, Google Pay, Interac, Klarna, SPEI, Oxxo Pay — market by market
- ↗ **Automated reconciliation** across three providers' dashboards and settlement cycles
- ↗ Monitoring, PCI compliance & **certification upkeep** on every rail

3–4 FTE

A dedicated payments engineering squad + Ops team for each new market

Flair's own run-ops lever — the headcount Yuno's infrastructure avoids.

The hidden "maintenance tax"

Day-2 reality: every PSP API change, retry-rule tweak, compliance update and new APM becomes an internal project. Each month spent building the pipe is a month of the payments margin not captured.

Buying ships in weeks — building defers the value it's meant to capture

	BUY — YUNO	BUILD — IN-HOUSE
TIME TO VALUE	Live in 4–6 weeks	12–18 month build before any value
ANNUAL COST	~\$243.600 / yr at 120.000 trx/month — success-based, no setup	~\$0.6–0.8M / yr fully-loaded squad + infrastructure <i>(est.)</i>
HEADCOUNT	0 — Yuno-staffed, engineer-supported	3–4 dedicated payments engineers + Ops per new market
CONNECTOR MAINTENANCE	Yuno owns 450+ provider integrations, certifications & updates	Every Nuvei / Elavon / Braintree API change is Flair's ticket
VALUE CAPTURED, YEAR 1	~\$5.4M average annual value, compounding from week 6	~\$0 while the stack is being built

~\$0.45M

of identifiable value is deferred for **every month** an in-house build is not live (\$5.41M avg ÷ 12) — the build costs more than it saves before it ships.

Assumptions Yuno cost per pricing slide subtotal; in-house squad cost is an estimate (3–4 fully-loaded payments engineers + ops); value per Total Impact average scenario.

Let's grow together
